Team model: an escalated case reaches a clinician who may adopt the handoff
Escalated case
DEFER, or COMMIT of OTHER
handoff q;
highest ranked
diagnosis shaded
A C D P O
clinician
f
$1-f$
Adopts the handoff
the team's answer is the highest ranked diagnosis in q
Decides independently
correct with probability $a_c = 0.89$, the accuracy of the MIMIC-CDM physicians
Team outcomes
team accuracy, in set cases (a)
wrong in scope diagnoses caused by the AI, unseen time critical cases (b)
$f = 0.47$: effect of adversarial AI advice on 225 physicians (Barrit et al.)
