The team model: an escalated case reaches a clinician who may follow the handoff
Escalated case
DEFER, or COMMIT of OTHER
handoff q;
top suggestion
in dark blue
A C D P O
clinician
f
$1-f$
Adopts the top suggestion
with probability f; the team's answer is the handoff's top choice
Decides independently
with probability $1-f$; correct with probability $a_c = 0.89$, the MIMIC-CDM physicians
Team outcomes
accuracy on in set cases (a, below)
wrong in scope diagnoses caused by the AI on never seen time critical cases (b, below)
$f = 0.47$: the effect of adversarial AI advice measured in 225 physicians by Barrit et al.
